(54) ACCESS CONTROL SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To improve a security function by enabling utilization only for a user registered in advance.

SOLUTION: A camera control client to become a user interface calls the inputs of a user name and a password to the user (S41 and S42). The inputted information is set to a camera managing server and it is confirmed whether that information is proper or not. When it is proper (S43), the use of system is permitted, the camera control client performs initial setting (S44) and following general processing is started. Besides, when the user name and password are not proper (S43), the camera control client stops operating as it is. In the initial setting (S44), user registration and the possession/display of camera list are performed. When no operation is performed longer than fixed time, user verification is executed again (S46).

LEGAL STATUS

[Date of request for examination] 04.12.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 3651998

[Date of registration] 04.03.2005
